OBJECTIVE

Results-driven engineering student with solid knowledge of C/C++, web development, and core concepts, seeking a Software Engineering role to build scalable, efficient, and reliable applications while continuously improving technical and problem-solving skills.

EDUCATION

JSS Science and Technology University, Mysuru	2022–2026
Bachelor of Engineering in Electronics and Communication Engineering	CGPA: 8.71/10
Justice Shivraj Patil PU College, Raichur	2020–2022
Pre-University Board, Karnataka	92%
RACE Concept CBSE School, Raichur	2020
Central Board of Secondary Education	90.6%

SKILLS

- **Programming Languages:** C, C++, Python
- **Web Development:** HTML, CSS, JavaScript, Node.js, Express.js
- **Databases:** SQL, MongoDB
- **Version control:** Git, Github
- **Coursework:** DSA, OOP's, Computer Networks, Operating Systems, Machine learning, Deep learning, NLP
- **Libraries and tools:** Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook, Sci-kit learn, Streamlit, Pytorch
- **Spoken Languages:** English, Kannada, Hindi, Telugu

PROJECTS

Course Market Rest API

Developed a secure RESTful API for an online course marketplace with role based admin/user authentication. Implemented user registration, course management, and purchase tracking with Zod validation, JWT authentication, and bcrypt security. Designed MongoDB schema with Mongoose and handled errors with environment-based configuration.

PDF Management System (iLovePDF Clone) using Node.js, Express & JWT

Built a full-stack PDF Management System with features like PDF merging, splitting, image-to-PDF, and Word-to-PDF conversion. Implemented JWT-based authentication for secure user access and session management. Integrated libraries such as Mammoth and Puppeteer for document parsing and PDF generation. Designed RESTful APIs with modular routing and middleware for scalable file processing. Focused on data security, error handling, and authenticated document access.

Crop Recommendation System

Designed and implemented a machine learning-based crop recommendation system using Logistic Regression and Naive Bayes to predict suitable crops from soil and environmental features. Applied data pre-processing, feature engineering, and model evaluation techniques, and built an interactive interface for real-time user predictions.
